Net Volume

Bulk

9.0 lbs per gallon @ 68°F

GENERAL INFORMATION: NUTRA-GEN is derived from the human food chain, digested into its basic nutrients. These nutrients feed organisms that live in the soil, building soil fertility and improving the efficiency of your fertilization system. NUTRA-GEN is meant to be used as part of your conventional liquid fertilization program.

SUGESSTED USE

Application

NUTRA-GEN is fine filtered below 74 microns and can be applied through any liquid application method including: banding equipment, water run through irrigation/fertigation systems, water run through drip lines, and/or sprayed directly on to soils in conjunction with other fertilizing materials upon application. NUTRA-GEN is acid fertilizer compatible. Always jar test before mixing with other fertilizers.

Drip Irrigation Injection Instructions

When injecting NUTRA-GEN into solid set drip or drip tape irrigation systems, it is recommended to dilute the product 2:1 - 4:1 on pre-dilution with water, prior to injection to match water viscosity for better dispersion in the line. For injection rates, please consult the NUTRA-GEN Storage & Application Guidelines. Please consult your sales representative if injecting material outside of label recommended rates. Line flushing is recommended within 4 - 7 days of injection to properly maintain drip lines.

Storage and Handling

Store in the original container, and do not mix with other fertilizer or pesticide products while storing the product as this could affect shelf stability. During winter months, be sure and store the container in an area protected from freezing conditions.

AGITATE, MIX OR STIR PRODUCT PRIOR TO USAGE

WARNING

Causes serious eye irritation. Wash thoroughly after handling. Wear eye/face protection IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. If eye irritation persists: Get medical advice/attention. REFERENCE: SDS0067.02
